**Q1 to Q12 have only one correct answer. Choose the correct option to answer your question.**

1. Which of the following is an application of clustering?
    - a. Biological network analysis
    - b. Market trend prediction
    - c. Topic modeling
    - d. All of the above ✓
  2. On which data type, we cannot perform cluster analysis?
    - a. Time series data
    - b. Text data
    - c. Multimedia data
    - d. None ✓
  3. Netflix's movie recommendation system uses-
    - a. Supervised learning
    - b. Unsupervised learning ✓
    - c. Reinforcement learning and Unsupervised learning
    - d. All of the above
  4. The final output of Hierarchical clustering is-
    - a. The number of cluster centroids
    - b. The tree representing how close the data points are to each other ✓
    - c. A map defining the similar data points into individual groups
    - d. All of the above
  5. Which of the step is not required for K-means clustering?
    - a. A distance metric
    - b. Initial number of clusters
    - c. Initial guess as to cluster centroids
    - d. None ✓
  6. Which of the following is wrong?
    - a. k-means clustering is a vector quantization method
    - b. k-means clustering tries to group n observations into k clusters
    - c. k-nearest neighbour is same as k-means ✓
    - d. None
  7. Which of the following metrics, do we have for finding dissimilarity between two clusters in hierarchical clustering?
    - i. Single-link
    - ii. Complete-link
    - iii. Average-link

Options:

    - a. 1 and 2
    - b. 1 and 3
    - c. 2 and 3
    - d. 1, 2 and 3 ✓
  8. Which of the following are true?
    - i. Clustering analysis is negatively affected by multicollinearity of features
    - ii. Clustering analysis is negatively affected by heteroscedasticity

Options:

    - a. 1 only ✓
    - b. 2 only
    - c. 1 and 2
    - d. None of them

9. In the figure above, if you draw a horizontal line on y-axis for  $y=2$ . What will be the number of clusters formed?

- a. 2 ✓
- b. 4
- c. 3
- d. 5

10. For which of the following tasks might clustering be a suitable approach?

- a. Given sales data from a large number of products in a supermarket, estimate future sales for each of these products. ✓
- b. Given a database of information about your users, automatically group them into different market segments.
- c. Predicting whether stock price of a company will increase tomorrow.
- d. Given historical weather records, predict if tomorrow's weather will be sunny or rainy.

11. Given, six points with the following attributes:

point	x coordinate	y coordinate
p1	0.4005	0.5306
p2	0.2148	0.3854
p3	0.3457	0.3156

**Q13 to Q14 are subjective answers type questions, Answers them in their own words briefly**

13. What is the importance of clustering?

14. How can I improve my clustering performance?

**Ans-13** I think during clustering we are losing information about the data. Generally, the clusters are seen in a spherical shape, but it is not necessary as the clusters can be of any shape. For companies, organization and categorization strategies are fundamental to success. Clustering information can make all the difference.

**Ans-14** I am currently studying about clustering while studying it I have learned that clustering is an Unsupervised learning (Segment the data into similar groups instead of predictions) and we can perform the clustering on the basis of the distance between the data point.
